

One exploration company in Myanmar used our PHD/HQ/NQ drill rods, PQ/HQ/NQ core barrels, PQ/HQ/NQ diamond bit in one of their drilling projects in copper prospecting.

The location of the drill site is in Sagaing Region. Their aim depth of the hole is 500m, their drill rig capability is 800m in N size. In the whole drilling process. Our drill rods, core barrels, diamond bit and other drilling tools all performed well. No bad feedback to us during the whole process.
