Quality Control

质　　量　　控　　制

Dongguan Kaixiang Industral Co., Ltd.

IQC

Incoming Quality Control (IQC) is the inspection and testing of components supplied by other vendors including dimensional, visual, and functional inspections on the incoming components.

IPQC

In Process Quality Control is performed during the manufacturing process. This step catches defects that may arise during assembly. Usually the random inspection in process will be done every 30minutes in case there is any quality failure or accident in production.

OQC

Outgoing Quality Control is the last step before fully assembled products leave the factory. We do a sampling once again to perform visual and functional inspections. Specific testing requirements will be confirmed based on different standards.The final qualified certificate will be delivered with goods together to customer.
