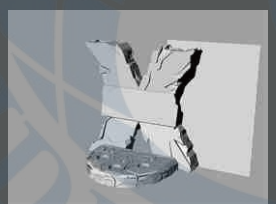
AN EXAMPLE OF HOW A CUSTOMIZED DISPLAY IS MADE

01

The idea comes from our client who needs an ice feeling X shape display to show his products.

02

The most difficult and challenging part here is how we can fulfill customer's request of the real ice effect in 3D drawing.



03

To make a gypsum mold according to the computer drawing is a step to realize it from paperwork to a real thing! Every cut and carving will end in a different result!

04

Finally with the LED light built in and shining though, we get a very icy display that satisfy our customer a lot!
